The Request for Continued Examination and Amendment filed 24 January 2005 has been entered.

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 33, 34, 40-42, 45-48 and 50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haynes US 5,091,187 in view of Duclos et al US 5,776,495. Haynes teaches a process for preparing water-insoluble microparticles comprising size reduction by sonication utilizing phospholipids to surface treat active agents. These conventional sonication methods are well known in the art. Column 11, line 14 through column 12, line 61. The reference further teaches mixing active agents using multiple surface active agents considered equivalent to applicants' elements a and b of claim 33.

See example 5, column 16, line 60 through column 17. The reference does not teach fenofibrate, however it does recognize the significance of applying this technology to water-insoluble drugs. Column 12, lines 32-61. Duclos et al is relied on for teaching it is known to process fenofibrate co-precipitates utilizing surfactants such as polyvinylpyrrolidone and polysorbate 80. See Abstract, column 2, line 5 through column 3, line 36, column 5, line 6.

It would have been obvious to one of ordinary skill in the art to use the fenofibrate of Duclos et al in the Haynes sonication process to produce a fenofibrate surface modified microparticulate composition with enhanced serum absorption properties. The motivation being each inventor's desire to provide microparticulate compositions capable of achieving optimum therapeutic efficacy.

4. Claims 35, 36, 38, 39 and 52 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 55-67 are allowed.

Claims 1-32, 37, 49, 51, 53 and 54 have been canceled.

Claims 43 and 44 are withdrawn from consideration.

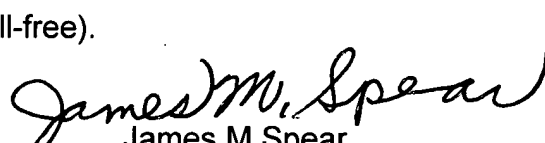

Claims 33, 34, 40-42, 45-48 and 50 are rejected.
